

<b>TEST SCHEDULE CASTALIA_STAT012BIS</b>		<b>SOLVING</b>	<b>BEAM PROBLEM</b>	<b>SOL.SAR.STAT012BIS</b>
<b>FINITE ELEMENT</b>			<b>SOLVER</b>	<b>CLEVER (SARGON ©)</b>

#### Problem description:

Simply supported beam with internal shear force (midpoint)

**Keywords (english):** validation, benchmark, statics, finite elements, fem, solver, precision, reliability, quality control, beam, error measure

**Keywords (italian):** validazione, benchmark, statica, elementi finiti, fem, solutore, precisione, affidabilità, controllo qualità, travi, misura di errore

#### Editorial note:

Target values are based on theoretical values, cross check values or accepted values. Where "theoretical" values are used, target values have been computed using well known formulae and/or published results.

#### Note:

Shear area is not used, that is shear energy neglected.  $Dxi$  and  $Dzi$  are the offsets from lower Z alignment leftmost available node.

Bending M2, J extreme. Beam # 1. Load case # 1			0.0000e+000	Th	-9.3132e-010

Cv                    computed value

Tv                    target value

TvK                  target value kind (theoretical, cross check, accepted).

Th                    theoretical value

Cr                    cross check value (theoretical target value is not known, results obtained with a different program are used as target values).

Ac                    accepted value (a value which, on the basis of some argument, can be considered acceptable).

100(Tv - Cv) / Cv    relative error percentage

Computational notes:

**Authors:** Ing. Marco Croci, Ing. Paolo Rugarli  
**Computed errors:** checksolvers.exe, by Castalia srl.
